## Glossary

Section	Description	Explanation
Site Details	Location	This is the road name, road number (where applicable) and location of the local concern camera site.
	Speed Limit mph	This is the current speed limit in place at the site.
Personal Injury Collisions	Injury Collisions	This is the total number of collisions resulting in injury across all severities, i.e. fatal, serious and slight collisions combined.
	Casualties	This is the total number of casualties of all severity, i.e. fatal, serious and slight casualties combined.
Speed Data (based on seven day temporary speed survey or connected vehicle data taken from the Speed Compliance Tool SCT)	Baseline	The is the speed data usually collected by the highways authority via a temporary seven day speed survey ('tubes across the road') between 1-5 years prior to the establishment of the camera site. For some East Riding sites, legacy speed data held on the C2 system has been used. For high speed roads (50/60/70mph) established before 2022 (advent of connected vehicle data), baseline speed data is often not available as the high speeds and nature of the roads do not lend themselves to installing temporary surveys as it woud require traffic management and road closures to safely install tubes, which is time consuming and costly.
	85th Percentile Speed (mph)	This is the speed at which 85% of vehicles are travelling at or below and is often used in engineering to determine the speed most drivers feel comfortable driving at.
	N/A	Speed data from the Speed Compliance Tool (SCT) is available by late summer of the following year and is usually not yet available at the time of publication of this report.
Offences	Camera detections	This is the total number of speed offences detected by <u>camera vehicles</u> for the previous calendar year. This figure is for camera offences only, i.e. it does not include offences detected by operational police officers at the roadside.
Additional Information	Reason for enforcement	This is an explanation of why camera enforcement commenced at the site. Local concern sites are selected by the local authorities as part of their speed management procedures.
